

Multi-Cam Production Made Easy Using V-Station®HD Producer4 Series Multi-Channel Recording/Switching/Streaming Packages

The newest and most affordable multi-channel video recording product from FutureVideo is the first multi-cam recording/switching/streaming system that can be used with a Windows-based PC, laptop, or Surface tablet. V-Station HD Producer4 series' powerful USB interface captures and records up to 4 channels of 1080p30 full HD video. It does this synchronously from a variety of SDI and HDMI cameras, as well as a single analog video source.

How Does It Work?

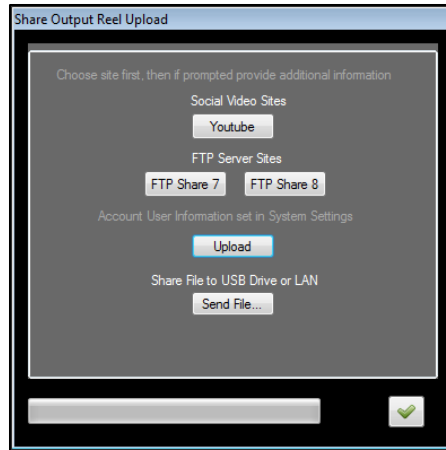

The V-Station HD Producer4 series software empowers the independent event videographer to not only record all 4 channels of video on the PC device (or an optional USB external drive), but to switch live between sources. By doing so, a “line-cut” of the event is created which in turn produces an edit decision list (EDL) of the video production. Producer4S’ line-cut is also recorded as a 5th video track, along with the 4 sources’ video tracks. Producer4 produces only the 4 channel recordings and an edit decision list.

The user experience, with V-Station HD’s exclusive AutoProducer® feature, is very intuitive. When using it with a touch-screen laptop or tablet, you can simply tap on any of the 4 preview tiles to switch between camera angles while the event is being recorded. The selected angle will be highlighted with a blue border as shown below:

V-Station HD Producer4 Series Record Panel

Producer4S’ line-cut recording can be immediately uploaded to a FTP site or to YouTube at the end of the event via its integrated uploader as soon as an internet connection is available.

Live Stream The Line Cut Recording

V-Station HD Producer4S makes it easy to live stream the line-cut to YouTube Live, Facebook Live, or as a private RTSP stream. No other streaming equipment is needed.

Fast Project Transfer to NLE

The V-Station HD project management software's built-in SQL media management system keeps track of all the projects being recorded. This makes it easy to transfer these projects—with all the footage and metadata—to your NLE. All the bins and sequences will be automatically generated by the V-Station HD xml transfer feature. There is no need to spend time organizing and categorizing the clips. They and the “cuts” you have made will automatically appear in your NLE's bin and synchronized on the timeline. You are all set to fine tune the production.

Applications For V-Station HD Producer4 & Producer4S

With the exceptional portability and easy interface to your own Windows-based laptop or Surface Pro tablet, independent videographers can readily expand the services being offered to include a range of multi-cam video projects. These include:

- Live performances, such a musical or theatrical productions, sports events
- Interviews, such as documentaries, or legal depositions, or courtroom proceedings
- Corporate meetings or conferences (single or multi-room capture)
- Religious services and cultural activities
- Community television and municipal events
- Training and behavior/clinical studies to observe and analyze behavior
- Hospital training and medical surgical procedures
- Mission simulation
